# DataLogic EVV System Provider Alerts

---

- The DataLogic EVV system will assist program providers by identifying incomplete or incorrect data and provide system alerts that require program providers to make updates prior to the data being exported.
- If an EVV visit transaction has failed to export to the EVV Aggregator, the program provider will be notified in the DataLogic EVV system and visit maintenance will be required prior to re-exporting the EVV visit transaction to the EVV Aggregator.
- Program providers can use the **Failed to Export Report** in the DataLogic system to track failed and rejected visits.

# EVV Visit Validation Edits

---

- The next three slides show an example of EVV visit validation edits, including:
  - Data elements (as applicable).
  - Visit rejection reasons.
- The following data elements will be tested for accuracy during the visit validation.

# Provider Best Practices (1 of 5)

---

Best practices for correcting visits which fail to export from DataLogic or are rejected by the EVV Aggregator:

- Have a plan to work DataLogic failed to export visits transactions and EVV Aggregator rejections timely to prevent a backlog that is overwhelming.
- Update internal systems, including third party billing systems, to match the standard data supplied by the state.
- Use June, July and August to ensure your visits pass the validation edits. Effective 9/1/19, these rejections will cause your claims to deny.

- Look for trends in your failed to export or rejected visits and correct any data, staff actions, or processes.
